Film Bank

- Lisa Goodell
- Scott Willrich
- Yishien Liu
- Joey Castillo

Elevator pitch

Concept

- The concept of our project was to create a website that could accurately give you movie reviews upon search for movie/actor
- Part of the motivation for building this site was due to the covid-19 pandemic,with everyone being stuck in the house more people are watching movies and some people are interested in the reviews of the film
- Given i am interested in information about a particular film
- When i search the film in Filmbank
- Then i see the poster and basic info about the film
- When i want to find a streaming source
- Then i see a list of streaming availabilities

Process

- Html, css , javascript ,materialize ,github repository
- We started breaking down work by first realizing what we were able to do together as a team and we knocked those things out first before we assigned
- One of the big problems that we ran into early was finding an api that had a public key and at the same time could perform the functions that we needed it too.
- Another problem we had was figuring out how to all work in the same repository and push with our own individual branches
- A great success within this was learning to use a new CSS framework within materialize

Demo

Directions for Future Development

Our plans for future development of this project include:

- Implementing a feature which allows you to see current movie showings in your area
-
